Geography Module: Bar Graph
Vanguard High School
Grade 8 Students

This bar graph is a snapshot of the impact of Covid-19 in the city of Montreal. It shows the change in the number of Covid-19 cases in various Montreal neighbourhoods during a one month period in the early spring of 2021.

The x-axis represents the different neighborhoods in and around Montreal that our Vanguard students live in. The y-axis represents the number of cases of Covid-19 in these neighbourhoods at the end of March and again at the end of April of 2021.

As seen in the bar graph, the number of cases increased in almost every neighbourhood, with the most dramatic increase in Ahuntsic-Cartierville, Côte-des-Neiges & Notre-Dame-de-Grâce, and Villeray & Saint-Michel & Parc-Extension.

With the vaccine roll-out in full swing we hope to see a marked decrease in the number of new cases as the summer progresses.
