Air Pollution in Calgary by Year, Writeup

The bar graph shows air pollution in Calgary by year. The air pollution is measured in PM2.5 (particulate matter), PM2.5 is an air pollutant that is dangerous for people's health when high. PM2.5 are tiny particles that reduce visibility when high and in cities with high air pollution like Los Angeles or Beijing, the air appears hazy in high amounts. The good air quality standard for PM2.5 is any pollution level under 12.0, Calgary has a PM2.5 of under five which means that there is little to no pollution and this shows Calgary has some of the best air quality in the world.
