

THIS! IS CANADA

VOILA! LE CANADA

## Human Impact On Household Greenhouse Gas Emissions

As the human population in Canada continues to grow, our impact on the environment does too. Humans have impacted the environment negatively and positively in the past thousands of years. Recently, humans have begun affecting it more negatively than ever before. This graph demonstrates that as the human population grows in Canada, so do greenhouse gas emissions from households. One Megatonne may not seem like a big increase, however, this can have a huge impact on our air quality. Humans should become more aware of how they use the energy in their homes and find ways to reduce their greenhouse gas emissions.
